LAB 2 Assignment: User Experience & Design Analysis — Netmeds

1. User Persona

- **Name:** Ananya Sharma
- **Age:** 22
- **Occupation:** Software Engineering Intern
- **Location:** Pune
- **Goal:** Wants to order medicines quickly and conveniently from home.
- **Tech Proficiency:** High (shops online frequently)

Goals

- Wants to order medicines without visiting a pharmacy.
- Wants clear medicine information before purchasing.
- Looks for affordable medicines and discounts.
- Wants reliable delivery and easy order tracking.
- Wants a simple and trustworthy ordering process.

Frustration

- Unclear prescription requirements.
- Confusing information about medicine availability or delivery.
- Difficulty getting quick help when an order has a problem.
- Unclear refund or cancellation information.
- Too much promotional content can distract from important information.

Story

Ananya has a busy schedule and prefers ordering medicines online whenever possible. She wants the process to be quick and simple, but expects clear information about prescriptions, payments, delivery, and refunds before placing an order. A smooth and trustworthy experience would make her more comfortable using Netmeds regularly.

- **Name:** Rahul Shetty
- **Age:** 43
- **Occupation:** Sales Manager
- **Location:** Pune
- **Goal:** Wants to order medicines for himself and his family without visiting a pharmacy.
- **Tech Proficiency:** Medium — comfortable with common mobile apps.

Goals

- Order medicines conveniently for family members.
- Find genuine medicines at reasonable prices.
- Get medicines delivered on time.
- Keep track of family members' orders and prescriptions.

Frustration

- Too many options while searching for medicines.
- Unclear prescription requirements.
- Difficulty understanding refund or cancellation processes.
- Delayed or unclear delivery updates.
- Wants quick support when an order has a problem.

Story

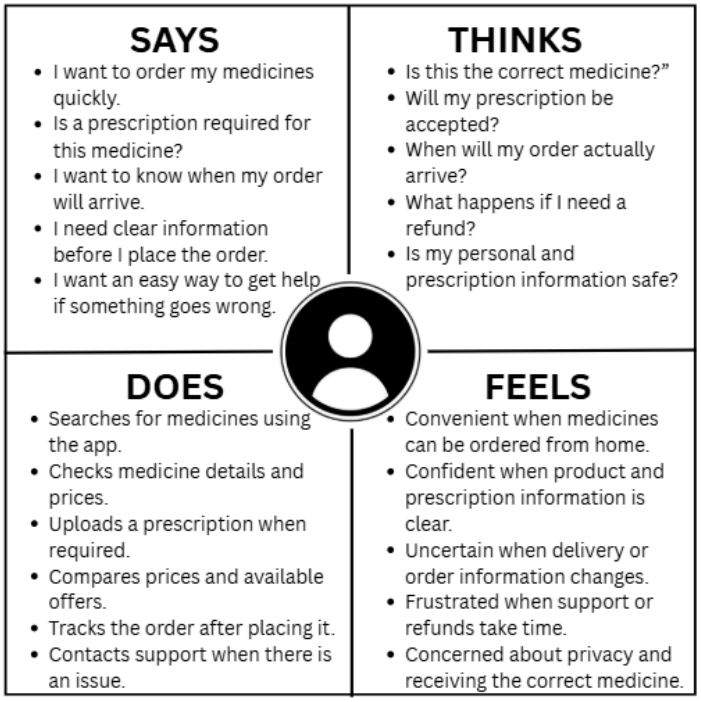

Rahul has a busy work schedule and often orders medicines for his family online. He prefers Netmeds because it saves time, but he wants the ordering and prescription process to be straightforward and reliable.

2. Pain Points

Based on the persona and empathy map, the major pain points identified are:

- **Unclear prescription requirements** – Users may be unsure whether a prescription is required and what type of prescription is accepted.
- **Too much information while selecting medicines** – Similar medicines, brands, prices, and alternatives can make selection confusing.
- **Unclear delivery information** – Users want to know exactly when their medicines will arrive and receive clear updates.
- **Payment and refund concerns** – Users may feel uncertain when a payment fails or when they need to cancel an order or request a refund.
- **Difficulty getting support** – Users expect quick help when they face problems with an order or delivery.
- **Trust and privacy concerns** – Users may worry about receiving the correct medicine and the safety of their personal and prescription information.
- **Basic UI -** Users may find the ui of website very basic. It is not interactive and upto the mark. Website have same repeated UI, where user is just scrolling and getting the same thing.

3.Empathy Map

4. User Journey Map

	Action 1: Open App / Website	**Action 2: Search Medicine**	**Action 3: Select Medicine & Review**	**Action 4: Prescription & Checkout**	**Action 5: Track Order & Receive**
Task List	A. Open Netmeds B. Log in / enter location C. View home screen	A. Enter medicine name B. Browse search results C. Check available options	A. Check medicine details B. Compare price/alternatives C. Add medicine to cart	A. Upload prescription if required B. Confirm address C. Complete payment	A. Track order status B. Check delivery updates C. Receive and verify medicines
Feeling	Curious, ready	Focused, careful	Cautious, uncertain	Anxious, hopeful	Relieved, satisfied
Adjective	Distracted by promotions	Overwhelmed by similar results	Unsure about medicine choice	Concerned about prescription /payment	Reassured by successful delivery
Improvement Opportunities	Simplify home screen and highlight search	Improve search filters and medicine categorization	Show important medicine information and comparisons clearly	Clarify prescription, payment and refund information	Provide accurate tracking and clearer delivery updates

5. Gaps for Future Improvement

These are the main **UI/UX gaps** identified from your research:

Existing Gap	**User Need**	**Future Improvement**
Prescription requirements may not be immediately clear	Clear guidance	Add simple prescription instructions before checkout
Similar medicines can be difficult to differentiate	Easy comparison	Improve medicine comparison with clear labels and key details
Important information can require extra searching	Quick access to information	Highlight price, availability, dosage information and delivery time
Payment/refund information may create uncertainty	Transparency	Show clear payment, cancellation and refund status
Support may not be immediately accessible	Quick assistance	Add a more visible and structured support section
Delivery information is important for medicine orders	Reliable updates	Provide clearer delivery timelines and tracking updates
Users have privacy and trust concerns	Security and confidence	Clearly communicate data privacy and medicine authenticity
Promotional content can compete with important information	Focused experience	Reduce distractions and prioritize essential healthcare information

6. Future Improvement Ideas

You can put these as your final **"Future Scope / Design Opportunities"** section:

1. Simplified Prescription Flow
Provide step-by-step instructions explaining when a prescription is required, how to upload it, and what happens after submission.

2. Better Medicine Comparison
Allow users to easily compare **price, composition, brand, availability, and alternatives** before selecting a medicine.

3. Clearer Order Tracking
Use a simple timeline such as:
Order Placed → Prescription Verified → Packed → Shipped → Delivered

4. Improved Support
Make **Help/Support** easily accessible and provide specific options for payment, delivery, prescription, cancellation, and refunds.

5. Transparent Refund & Cancellation
Clearly show whether a refund is initiated, processed, or completed instead of making users search for the status.

6. Trust-Focused Design
Clearly communicate medicine authenticity, prescription safety, privacy, and important purchase information.

7. Less Distracting Home Screen
Reduce unnecessary promotional elements and give more importance to **Search, Medicines, Orders, and Support**, making the UI more interactive.
